

Enterprise Design

The FTP Poller can be scaled to provide enterprise level solutions that can support world wide activity. The system can be relied upon to disseminate files as part of global workflow, enabling systems and colleagues around the world to focus on carrying out useful work instead of distributing files.

The key to the systems flexibility is its simplicity, anywhere you have an accessible routed network an FTP Poller can deliver files. So it doesn't matter if you use a worldwide MPLS cloud, leased lines, or VPN over the Internet, the FTP Poller can move files between you sites with no extra specialised configuration on your networks or firewalls.

The example shown draws on our experience of building global systems. In this case files originating in any one national headquarters would automatically be disseminated across to other national centres and down to regional offices. Reports originating in regional offices would be copied back up the tree to international headquarters.

FTP Poller

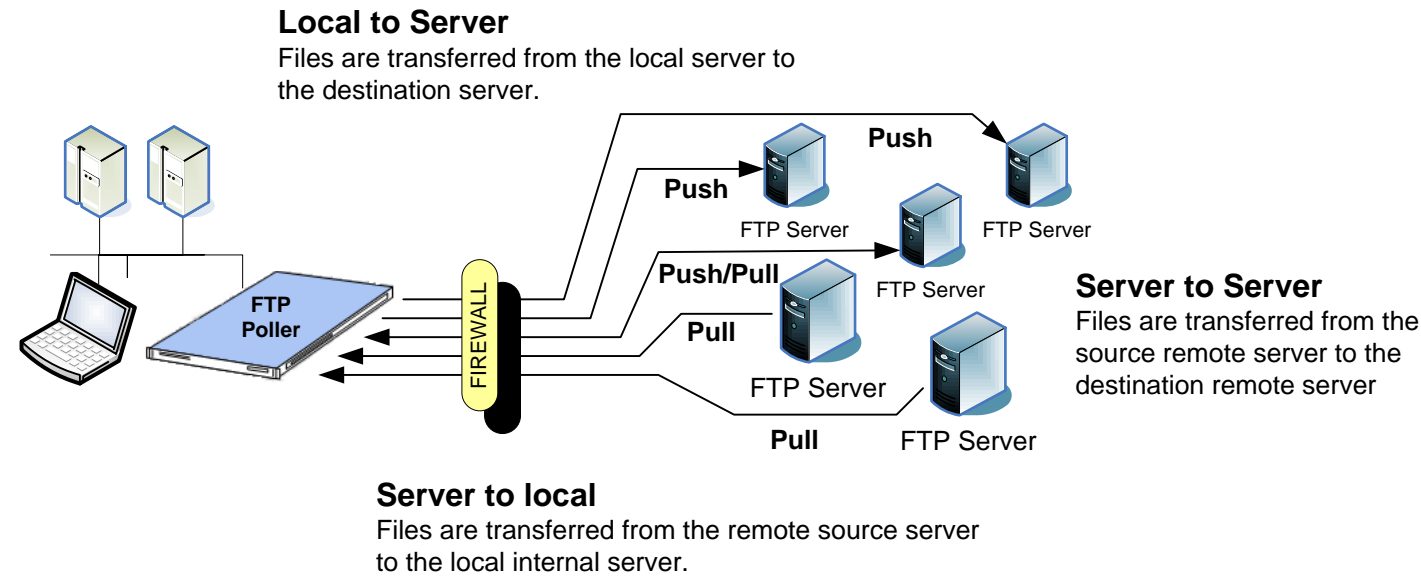

Automated, Secure, Reliable,
Managed File Transfer

FTP Poller

FTP Poller Operation

Introduction

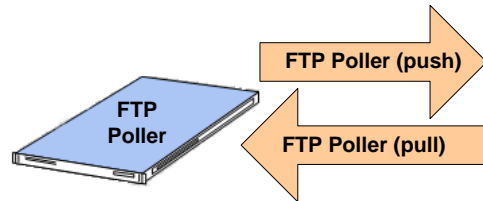

Layer3 Systems' FTP Poller provides an automated, extensible system that securely and reliably transfers files 24 hours per day 7 days per week. It can be provided as a fully managed service.

Automated

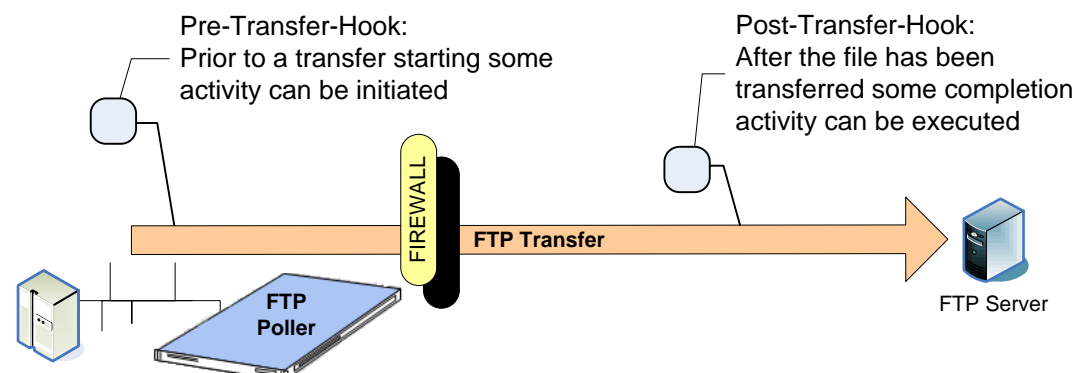

The FTP Poller automatically transfers files, repeatedly, reliably and securely between systems and networks owned by independent companies.

- Centralised Operation
- Reduces staff workload
- Audit Trail
- Runs 24 hour everyday
- Simplifies file transfer
- Managed service

Extensible

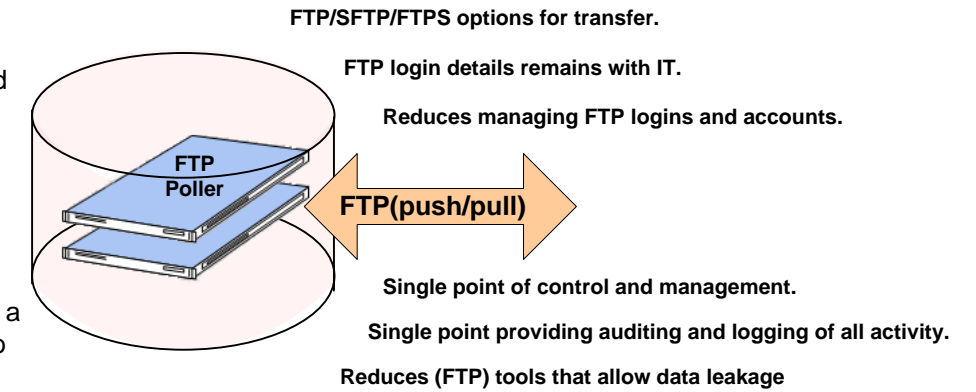

The FTP Poller can be integrated with your workflow so that it becomes an active part of your systems, helping to automate and simplify operation.

Secure

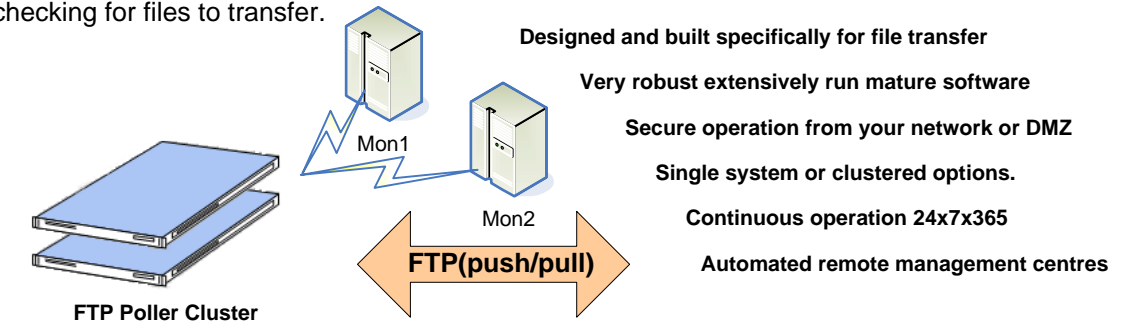

The FTP Poller enhances security by removing user interaction. Logins and passwords are reduced and centrally managed by IT. Reduces administration and reduces vulnerability to login theft/misuse.

The FTP Poller works in an internal network or more securely from within a DMZ, file shares give users access to folders managed by the FTP Poller.

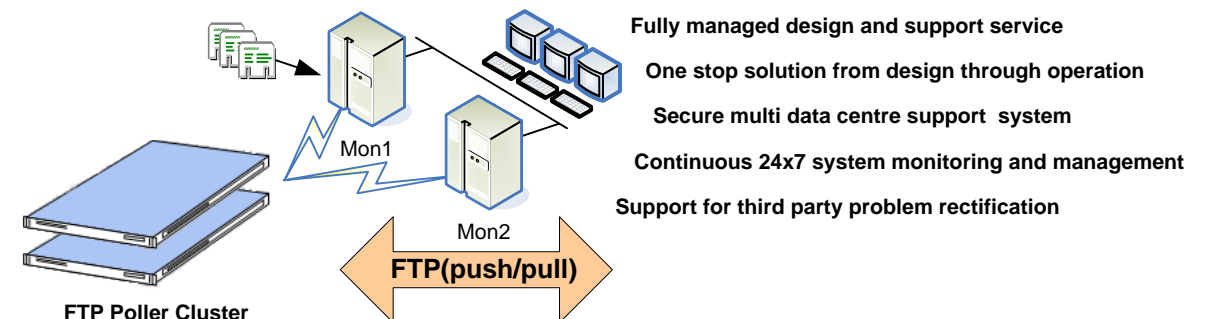

Reliable

The FTP Poller reliably moves files, generating audit trail and detailed transfer logs. Runs continuously, checking for files to transfer.

Managed

FTP Poller can be supported as a fully managed service. Layer3 Systems provides a complete solution in design, integration and support that reduces workload on your company minimising total cost of ownership. Managed securely from multiple, geographically separate, data centres.
